ACCUSONIC-200FS

SHEET PORTIONING

This ultrasonic vertical slicer is built to cut various sticky, delicate, and hard to slice products such as sheet cakes, brownies, rolls, and more. The machine uses a conveyor surface or in the box/pan holders to cut full sheet products with ultrasonic blades. The 200 series features 2 cutting stations to increase production speed by slicing with two ultrasonic stacks at the same time. Bakeries slicing more than 2 full sheets per minute find this machine valuable. Each machine is built to order, using the specific bakery's requirements to design and deliver a machine custom for the bakery's needs.

FoodTools machines are manufactured and assembled in the United States of America and supported by a network of international distributors. Specifications and production rates are subject to change and are dependent on the product makeup, temperature, upstream or downstream processing, and additional accessories to standard equipment. Consult FoodTools for accurate throughput rates and portion sizes for your unique products.
